# Version control using Git and github.com

#### **About Me**

- Akinjobi Sodiq
- WordPress Evangelist
- Web developer
- Love teaching math and code

# **Topics**

- → Version Control
- → Git
- → Github

#### QUICK STORY

> Ade and John are working on a website for UNIBEN

> It has to be ready before christmas, so they decide to start on Dec 1st

- > They start working on the front end first(html and css and javascript), they work on different parts, Ade works on html and css, john works on javascript. They use flash drives to share their work
- > John has to travel to Kano for an impromptu event which shouldn't take up to a week. He decides to complete the javascript part

> The impromptu stuff takes more time than John expected. It's a week to christmas and the project isn't ready

> Uniben VC contacts Ade about the website. Ade relays this to John, They decide to do massive coding so the project is completed on time

- > John comes back 3 days to christmas with 400 extra lines of Javascript and meets ade with 600 extra lines of html and css
- > They try to connect their code together and start seeing errors scattered across the codebase
- > They get frustrated, start blaming one another and abandoned the project

# VERSION CONTROL

Version control is a system that records changes to a file or set of files over time so that you can recall specific versions later.

#### It allows you to

- Revert files to a previous state
- Revert a project to a previous state
- Keep version of files
- See who modified what? And much more

# Popular VCS.

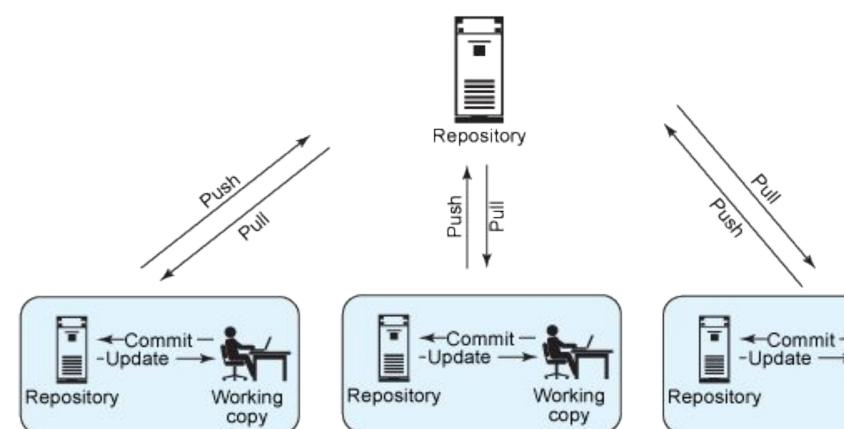

- Subversion(SVN)
- Concurrent Version System(CVS)
- Mercurial
- Git

# GIT

- Developed by Linus Torvalds, creator of Linux operating system, in 2005
- Type of Distributed Version Control
- Most popular version control system

#### Distributed version control system

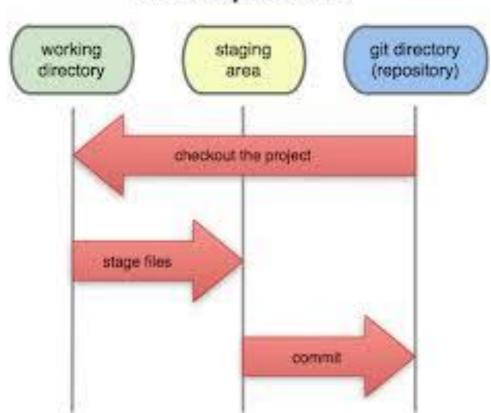

**HOW GIT WORKS** 

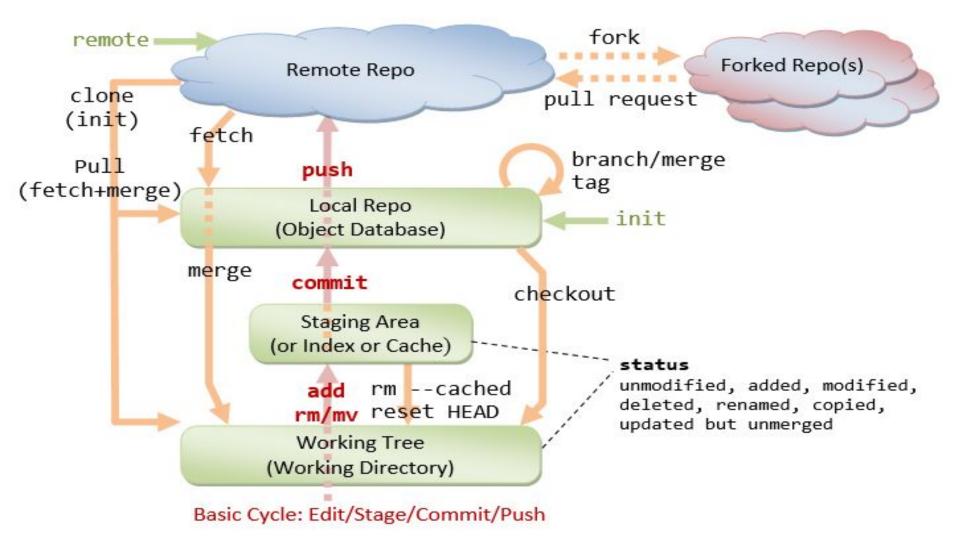

Working

copy

#### **Local Operations**

Git flow on local system

### GIT BUZZWORDS

Repository Push

branch

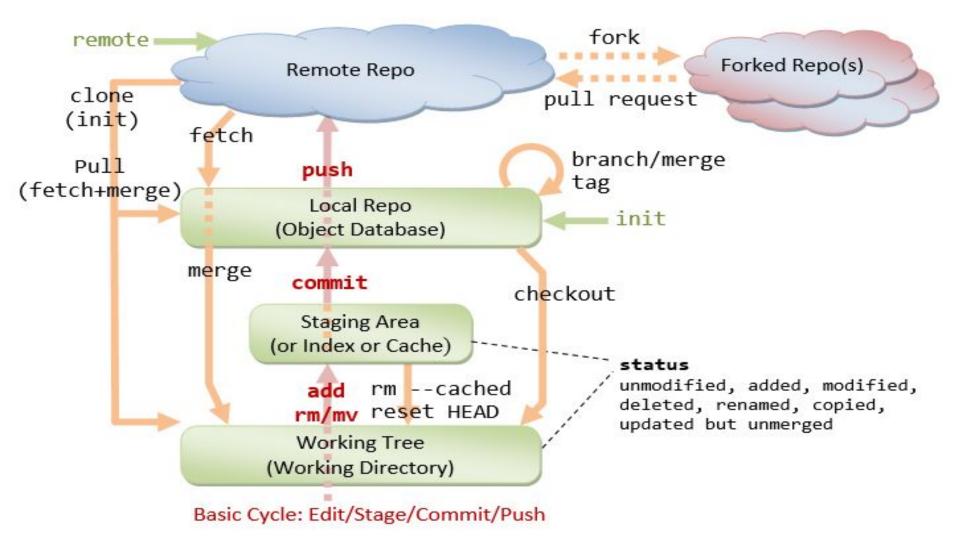

init

Add Merge

Commit Pull request

Fork

# Let's look at that scary image again

# **GitHub**

#### **GITHUB**

- Web based
- repository hosting service for Git
- Relatively free

#### Aids in

- Individual development
- Group development

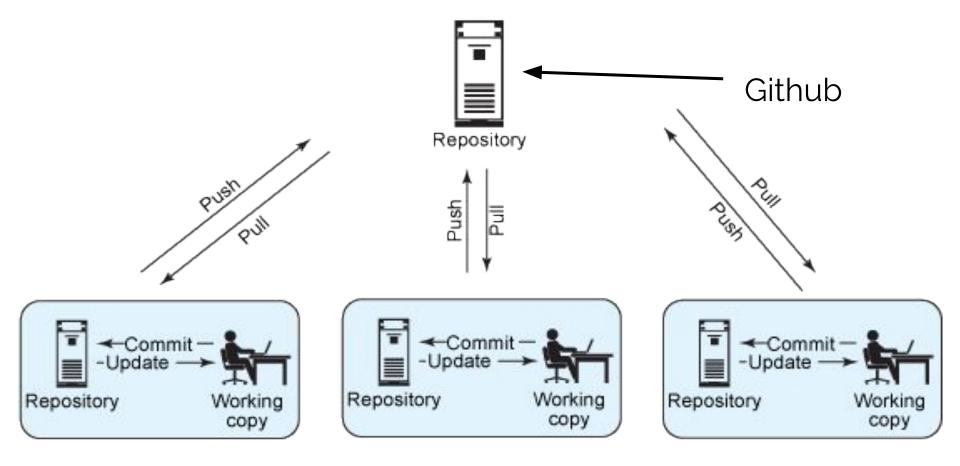

#### Git

- Example of version control
- command line tool

#### **Github**

- > repository hosting service for git
- > web graphical interface that works on top of git
- > social platform for developers
- > online CV
